Analyse af resultaterne

Vi har bekræftet tilstedeværelsen af grafenark, grafenbånd, grafenmikrobobler, grafenagglomerater og/eller grafenderivater i alle prøver.

Vi har også fundet tilstedeværelsen af kunstige rektangulære og firkantede strukturer, der er kompatible med mikrokredsløb, i alle hætteglas.

Fotografier er vedhæftet.

Sebastian
